ENFORCEMENT FLOWfail closed at every step

principal verified via Dojang → license minted to the agent → policy set: cap and venues → agent trades through the gate → unlicensed or out of policy reverts → revocation lands in one block → permanent public verdict page

The default is refusal. A missing license, an expired license, a spent cap, or an unknown venue ends the same way: the trade reverts.

IDENTITYtwo lanes, one interface

Lane 1 · DojangScroll
Reads Upbit Korea verification attestations. This is the mainnet rail.

Lane 2 · GIWA EAS predeploy
Attestations on GIWA's EAS predeploy. Live on testnet with the self-serve verification desk.

Both lanes sit behind one interface, `IVerifiedAddress`. Switching lanes is constructor arguments, not new code.

- TECHNICAL EXECUTION
- 102 passing tests. Zero failed, zero skipped, invariants included.
 - Slither audited. Every finding triaged on the record.
 - No database. The chain is the record.
 - The SPA ships from the same hardened Express process.

- Line coverage above 90 percent on contracts, held as an exit law.
 - The contracts on the trade path are immutable and fail closed.
 - Stateless server with a single secret.
